

Disposable Windshield Protection (DWP)

This new product prevents transparent armor windshields from being damaged by stone-chipping or stones intentionally thrown at the vehicles. Due to its high transmittance it can also be used for the protection of driver periscopes and other optical devices.

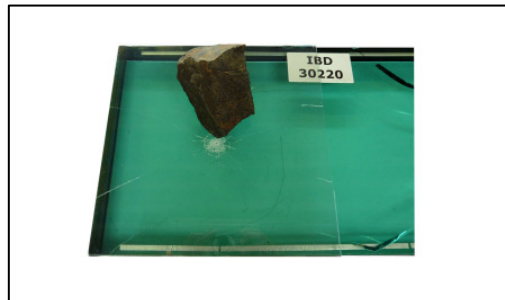

The DWP consists of a thin transparent sheet that is mounted on the windshield with a thin fluid film in between.

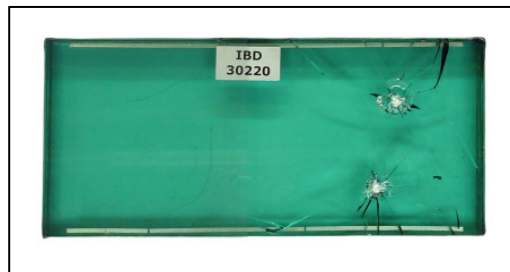

In case the protected windshield is hit by a stone the DWP prevents chipping or cracks in the transparent armor. The damaged sheet can easily be taken off from the windshield and be replaced by a new one.
